

NEMATODE AND INSECT CONTROL FOR POTATOES

Broad-Spectrum Control

Mocap® Nematicide/Insecticide has activity on most potato nematode species as well as wireworms and symphylans.

Application Flexibility

Both **Mocap 15G** and **Mocap EC** are labeled for use in potatoes. **Mocap** may be applied in a band on row or in a broadcast treatment.

Planned Program Approach

Mocap used in a planned program with Vapam® HL™ and K-Pam® HL™ has provided consistent, high-yield results.

Broad-Spectrum Control

Mocap formulations provide potato growers with dependable control of soil insects and damaging nematodes. This broad-spectrum control consistently provides high-yielding, quality potatoes. **Mocap** is active on a wide range of nematodes that reduce potatoes yields.

Labeled Pest Control for Potatoes

Soil Insects: Wireworms and symphylans in all geographies; applied either banded or broadcast

Nematodes: See chart below (always consult label of specific product used as rate and application methods vary by geography)

Type of Nematode	Banded Application	Broadcast Application
Lesion	Control	Control
Southern root knot	Control	Control
Northern root knot (outside the PNW)	Control	Control
Northern root knot in PNW	Not Labeled	Control
Columbia root knot in PNW	Not Labeled	Suppression only
Stubby root nematode (outside the PNW)	Suppression only	Suppression only
Stubby root nematode in PNW	Not Labeled	Suppression only
Spiral	Control	Control
Ring	Control	Control
Stunt	Control	Control

Packaging Options – for Today's Potato Growers!

Mocap 15G: Available in 2 convenient packaging options to fit a variety of granular application equipment (40 lb Lock'N Load®, 30 lb bag).

Mocap EC: Available in cases of two 2.5 gal jugs as well as 135 gal minibulk for application flexibility.

Application Methods and Rates

To achieve desired control:

- Nematicidal activity at higher rates (6–12 lb ai/A).
- Insecticidal activity at lower rates (4–6 lb ai/A).
- Contact activity only – not systemic.

Always consult label for specific information.

Summary

Mocap is a unique non-fumigant option for residual control of key nematode and insect pests for consistently high-yielding and high-quality potatoes.
