

BETTER-LOOKING WHEAT. IMPROVED CROP YIELD POTENTIAL. ONE-OF-A-KIND BIOLOGICAL SOLUTION.

Product Description

B Sure® is a liquid nutrient that mitigates abiotic stress (e.g., environment, nutrient, herbicide, etc.) and improves photosynthesis that supports grain fill. B Sure consists of a shrimp protein hydrolysate that provides readily available plant nutrients to aid in plant growth efficiency, root growth, and improved nutrient conditions for optimum yield.

Features

- Provides free amino acids, peptides, other by-products and metabolic micro-nutrients.
- OMRI approved for organic crop use
- Up to three-year shelf stability
- Tank-mix compatibility with fungicides, insecticides, herbicides, or nutritional products

Application Rates

- B Sure use rate: 1 pt/acre
- Recommended to include nonionic surfactant at 0.25% v/v if applied alone

Key Benefits

- Mitigates stress that leads to yield loss
- Reduces crop recovery time following herbicide application
- Can improve test weights and grain fill when applied with fungicides at reproductive stage

Yield Data

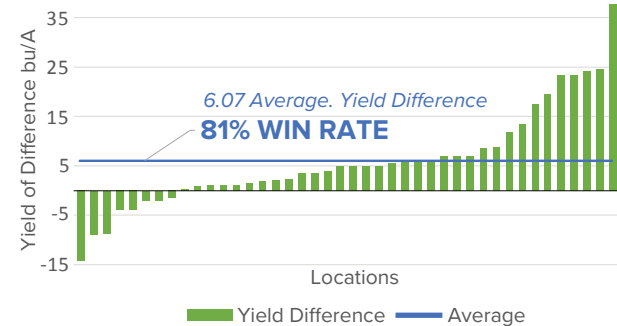

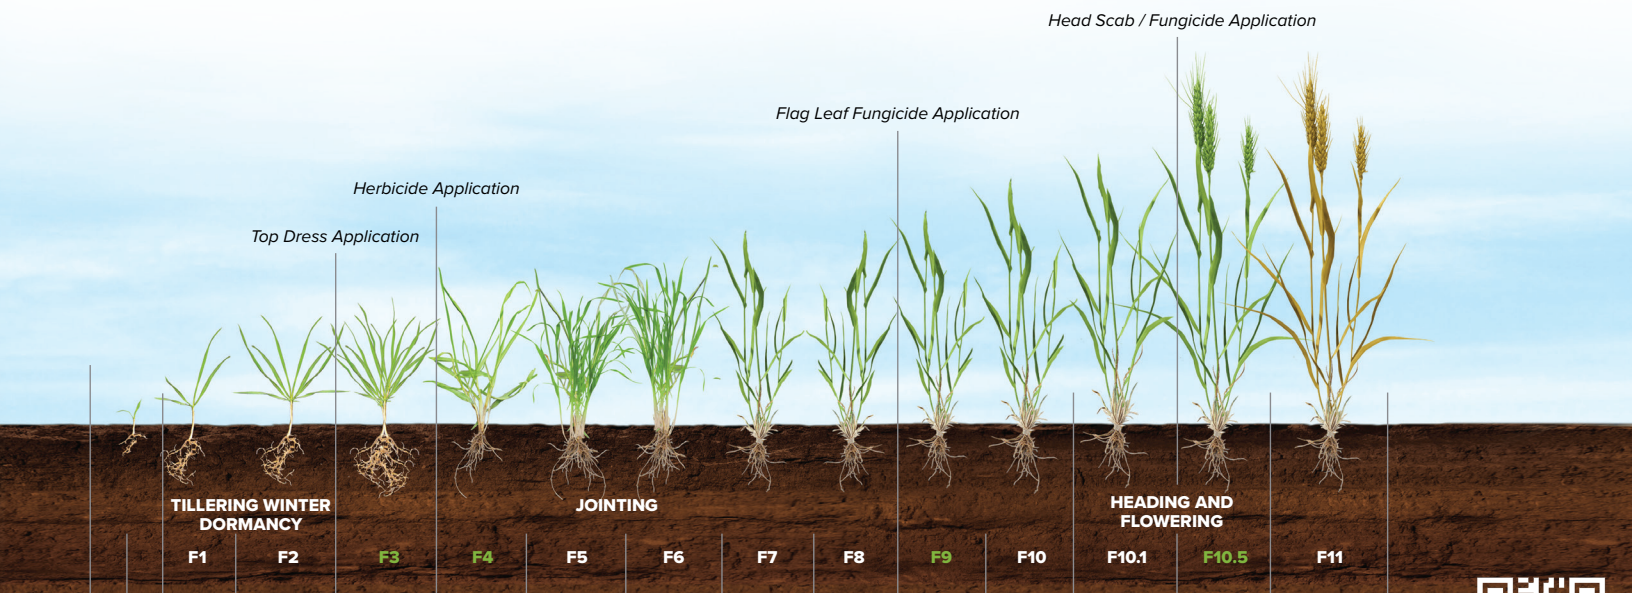

Figure 1. N = 42 observations from third-party trials. All rates, application methods, and timings. Reported here are all B Sure® rates, treatment combinations, and tank mixes reported in these studies unless directed comparisons to a control were not possible.
